

About Me

Hi there. I am a second year freshman at Faculty of Electric Engineering of the University Ljubljana.

In this jekyll based resume you will get to know some facts about me.

Research Interest

I specialize myself into researching the effects of seismic movements on radioactive radiation in the vicinity of Nuclear powerplant Krško in Slovenia. If I recall, when I was a child, I was always fascinated by large earthquakes that seemed so powerful and unstoppable. On the other hand radioactive radiation brought my attention in highschool.
